Chia-Jung Hsieh (Nikita)

Hi, I'm a frontend developer and UX/UI designer who loves crafting clean, accessible, and user-centric web experiences. My work bridges design and development, with a strong focus on usability, performance, and visual clarity.

In recent projects, I've been responsible for both the visual and frontend aspects of product development. I build responsive interfaces using Vue 3 and the Quasar framework, and I've also implemented system email features through Laravel. I specialize in turning design concepts into well-structured, maintainable code that supports a smooth user experience.

I've contributed to a range of products, including CRM tools, digital twin platforms, IoT dashboards, and e-commerce websites. These experiences have deepened my understanding of how system logic connects to user behavior, and how thoughtful design can bridge that gap.

I'm always eager to explore new tools, design systems, and technologies. I stay up-to-date with the latest trends in UX and frontend development, and I enjoy refining products by identifying user pain points and transforming feedback into meaningful improvements.
